

To whom it may concern:

I highly recommend the services of COMtuity as they exceeded our expectations as telecommunications consultants & project coordinators. I'm the VP of Business Development for MedWorxs, LLC and I'm responsible for creating key partnerships that will help us build our business.

In the fall of 2006 MedWorxs moved their network & systems infrastructure to a new facility. Since we are not experts in wide area network technologies, we required the knowledge of a consultant that knew how to design a scalable T1 solution for our business with a carrier that would provide excellent service and evolve with us as our requirements changed. Carrie worked as an extension the MedWorxs staff showing us multiple carrier options and then recommending the most viable solution given our business, budget and technical needs.

We rely on COMtuity to be MedWorxs expert for our telecommunications infrastructure and to keep an eye and ear on the street for new technologies and price plans that will work to our benefit. We have peace of mind knowing that she is proactive in seeking out what solutions serve our needs best. In addition, Carrie is our liaison with the carriers. This is huge for us because she speaks the language of this complex world has no allegiance to any single carrier.

Moving our infrastructure involved many complexities and it was extremely helpful to turn the telecommunications piece over to COMtuity. Our move was well coordinated and came in on an aggressive timeline & right on budget. The T1 service has been extremely reliable and we are very happy with the new infrastructure.

In the coming years we expect to see our business grow and therefore the need to increase our carrier infrastructure. Carrie has already begun to evaluate solutions for our upcoming requirements.

Once again, I confidently recommend the services of COMtuity. Please feel free to contact me in regard to this valued partner.

Sincerely,

Gregory L Noble
